Spillmaster

The **ECEFast Spillmaster** was designed to work in conjunction with ECEFast Float level switches S1 and S4 Series for overflow protection during tank filling operations.

Using standard 9V dry cell batteries it provides an alarm light for high level and a loud siren. When the siren is activated, it continues until the mute button is pressed.

It is intended to be mounted close the where the operator is controlling the tank fill dispenser or pump, and it can then be muted readily as soon as the fill process is stopped.

The box itself can be mounted directly on the float level probe, or remotely, in order to satisfy this requirement. The Spillmaster box cannot be mounted in a Zoned hazardous area.

Part Number: EC-SPILLMASTER

- Battery powered weather resistant enclosure
- Battery condition LED and high alarm LED
- TEST button for function check [start light and siren]
- MUTE button to deactivate siren
- High alarm remains active until level drops
